

## Goals

One of the goals of our sprint one was to first create a roadmap of how the screens were linked together. The first part of this was brainstorming what screens needed to be implemented for our application. Once we had brain stormed each screen, the road map was created. After we had the road map completed, we were each assigned one or two screens to design and implement with buttons, UI and other simple functionalities. In order to implement the “Log In” screen we needed to utilize the Firebase API for logging in. After creating each screen individually we were able to connect all of them based on our roadmap that was created earlier. We were also required to complete our project’s website before the first sprint. This included our “Home” page, our “Team” page and our “Project” page.

## Sprint Backlog

The image displays a Jira Sprint Backlog with 18 tasks organized into three columns. Each task card includes a priority number, a title, a 'Sprint 1' label, and various status icons.

Priority	Task Title	Labels	Status
25	Dev new abigail	github-pages	In Progress
24	changes to choose outfit page	github-pages	In Progress
23	basic choose outfit page	github-pages	In Progress
22	Register Screen	Sprint 1	Not Started
21	Login Screen	Sprint 1	Not Started
20	"Project" Page on Website		Not Started
18	"Team" Page on Website		Not Started
17	Closet Screen		Not Started
16	dropdown menu	Sprint 1	Not Started
15	home screen update	github-pages	In Progress
13	home screen stuff	github-pages	In Progress
1	update to virtual closet & outfit finder	github-pages	In Progress
6	Brainstorm Screens		Not Started
5	Add theme to login page	Sprint 1	Not Started
3	Develop Theme		Not Started
2	Integrate Firebase for Authentication		Not Started
7	Flowchart/Decision Tree for screens	Sprint 1	Not Started
